In early May the Atlantic States Marine Fisheries Commission’s American Lobster Management Plan approved Addendum 27 to the Lobster Management Plan. The Addendum establishes a trigger which would cause certain management measures to go into place, specifically gauge and escape vent sizes in Lobster Conservation Management Areas (LCMAs) 1 and 3. The Addendum also changes management measures for the Outer Cape Cod LMA to improve the consistency of regulations.

The Bureau of Offshore Energy Management (BOEM) held a two-day meeting of the Gulf of Maine Intergovernmental Renewable Energy Task Force in Bangor in May. The Task Force is composed of federal, state, local and tribal government officials from Massachusetts, New Hampshire and Maine. Its role is to help coordinate energy planning activities in federal Gulf of Maine waters. The purpose of the meeting was for BOEM to update task force members and the public on the Bureau’s offshore wind energy planning activities in the Gulf, and to discuss next steps regarding the lease process underway for the area.

Two developments are underway in the Gulf of Maine. First, BOEM is in the process of developing a lease area in the Gulf for commercial wind energy projects. BOEM published a Call for Information and Nominations for leases in the Gulf. This Call invites public comment on and assesses interest in possible commercial wind energy development in areas offshore Massachusetts, New Hampshire and Maine; comments are due by June 12. Second, the state of Maine has an application before BOEM to lease an area in federal waters off southern Maine for an offshore wind energy research array. The purpose of the research array is to build a small-scale commercial wind farm to conduct research to better understand the impacts of large-scale commercial wind development in this region. BOEM published the Gulf of Maine’s

Jace Doughty, 16, likes to lobster. In fact, he’s liked to lobster since he started with his father Travis at age 6. Sure, there were a few bumps in the road back then. “I remember seeing a lobster for the first time. It freaked me out. Plus, one got me,” he recalled.

Since then, lobstering has been a key element in the life of this busy young man. Now a junior at Oceanside East High School in Rockland, he fishes from Cushing aboard his 32-foot boat, Chasing Tail, which he co-owns with his cousin Noah Ross. He got his lobster license at age 14. “I started out in a skiff with five traps. Once

Welcome summer! The skies are blue and Maine’s summer visitors have returned. A fresh lobster fishing season is underway with fingers crossed in the state's small harbors that the year is a good one.

Lobstermen are talking about the cost of bait, of fuel, of all the various supplies and gear needed to leave the dock. And also about the Atlantic States Marine Fisheries Commission (ASMFC) approval of Addendum 27 to the interstate lobster management plan. Nicknamed the “resiliency” addendum, Addendum 27 calls for changes in minimum and maximum legal sizes for lobsters if surveys show a 35% decline in recruitment. In May, Department of Marine Resources Commissioner (DMR) Patrick Keliher addressed lobstermen’s misgivings about this change in a letter to fishermen, which we reprint in this issue.

HERRING FISHERY SUPREME COURT CASE CHALLENGES FEDERAL OVERREACH

By Melissa Waterman

For many years, East Coast herring fishermen have argued that the National Marine Fisheries Service (NMFS) does not have the authority to require them to pay for mandated fisheries observers on their vessels, whose salaries may equal 20% of their yearly revenues. With no relief from NMFS, the fishermen turned to the courts, unsuccessfully. Now their argument will be heard by the U.S. Supreme Court.

In May, the Court announced that it would take up an appeal petition from the fishermen. The Supreme Court receives thousands of petitions annually and accepts less than 1% of them. The Court’s ultimate decision in the case may affect the extent of all federal agencies’ authority.

The herring fishermen, led by Loper Bright Enterprises of New Jersey, are represented by Paul Clement, who also represents the Maine Lobstermen’s Association (MLA) in its legal case against NMFS. In Loper Bright Enterprises Inc. v. Raimondo, the fishermen argue that it is not within NMFS’s authority under the Magnuson-Stevens Fisheries Conservation and Management Act to require fishermen to pay for fisheries observers.

Chevron vs. the EPA allows courts at all levels to defer to an agency’s interpretation of the law when the law’s intent is not explicit but rather implicit. A court may not substitute its own interpretation of the law for a reasonable interpretation made by the administrative agency.

The Washington D.C. district court came to a similar conclusion concerning the MLA’s case against NMFS regarding the agency’s 2021 Biological Opinion on the lobster fishery, which established a ten-year right whale conservation plan. In its 2022 ruling in the MLA’s case, the district court also gave deference to NMFS, saying that the agency “considered the relevant data and offered a rational and peer-reviewed explanation for its approach.” The decision is currently under appeal.

The herring fishermen’s petition to the Supreme Court states that the Magnuson-Stevens Act expressly grants NMFS the authority to require a fishery to pay for observers in only three specific instances and that the Act does not give NMFS general authority to require other fisheries to pay for observer coverage.

It is not yet clear what the result of this case could mean for commercial fisheries. Among the potential outcomes, the Supreme Court may hold that the D.C. Circuit misapplied Chevron because the statute unambiguously did not allow NMFS to take this particular action. Or the Supreme Court may determine that Chevron is wrong and must be overruled or clarified because it allows for agencies to take unlawful actions.

The Supreme Court is due to hear the case in its next term, which begins in October.

In Loper Bright Enterprises Inc. v. Raimondo, the fishermen argue that it is not within NMFS’s authority under the Magnuson-Stevens Fisheries Conservation and Management Act to require fishermen to pay for fisheries observers.
By Patrick Keliher, DMR Commissioner

By now you have probably heard that the Atlantic States Marine Fisheries Commission (ASMFC) Lobster Management Board voted to approve Addendum XXVII. I have heard a lot of misinformation regarding the outcome of the Addendum, so I am writing to outline what happened at the Board meeting.

The Addendum specifies that management measures in LMA1, including changes to gauge and escape vent sizes, will only be implemented if the Board observes a 35% decline in a trigger index which looks at data on recruit abundance (71-80 mm lobsters) in the trawl and ventless trap surveys. These measures are intended to allow more sublegal lobsters to reproduce before being harvested and increase spawning stock biomass.

I heard clearly at the zone meetings and at the Lobster Advisory Council (LAC) that change was not looked at positively, but neither was stock collapse. Most of those conversations really focused in on a higher trigger but certainly the idea of a 45% trigger and understanding that landings would likely drop to around 60 million pounds before a trigger was pulled was concerning, so the advice to me seemed to focus on in the mid-thirty range.

The Board was considering a range of triggers from 32% to 45%. I made an initial motion for a 38% trigger in the interest of finding a compromise, but it was clear that some states wanted either an immediate gauge change or a low trigger, so ultimately the Board narrowed in on a compromise and went with 35% trigger.

I want to emphasize that a gauge size change won’t happen this year. The ASMFC Lobster Management Board will review the data each October, and if a 35% decline is observed, the change would not take place until June of the following year.

Also, if the trigger is tripped, the changes won’t happen all at once. A minimum gauge size increase of 1/16th of an inch will be triggered in LMA1 in the year after a 35% decline is reported. The minimum gauge size for LMA1 will increase again by 1/16th of an inch in the 3rd year. The Board did vote to push back any changes to the escape vent sizes in LMA1 until year 4 based on public comments received from fishermen.

The Board also took critical action to bring other LMAs up to the conservation standard of replacement trap tags to harvesters in LMA 1 and 3 unless trap losses are documented. This is a practice which Maine has implemented for some time and now other jurisdictions will meet Maine’s standard.

The Board also established a maximum gauge size in Outer Cape Cod (OCC) state waters, finally closing a loophole which allowed oversized lobsters to be imported from Canada. In addition, the Board established a more conservative v-notch definition in OCC state waters of 1/8” (previously 1/4”), creating a consistent v-notch definition between LMA3 and OCC. LMA1 maintains a zero-tolerance v-notch definition.

Finally, I made a motion that the Board requests the ASMFC Interstate Fisheries Management Policy Board approve the creation of a subcommittee to engage Canada in issues related to importation of lobsters between the two countries. These conversations will be critically important to ensure equity for our harvesters and to support continued strong working relations between US lobster processors and Canada.

While I recognize that it’s an especially tough time to think about future changes in the fishery, this change to the Fishery Management Plan is necessary if we want to ensure the long-term resilience of this important fishery.

To summarize, every October the ASMFC Lobster Management Board (Board) will review trawl and ventless trap survey results to see if the 35% decline in the recruit abundance has occurred. We are currently at a 23% decline in abundance, and at this point we can’t predict when the 35% decline will be reached. If a 35% decline is not observed during the fall board meeting, no action will be considered until the next year’s fall meeting.

Addendum 27 continued from page 1

The Board also established a maximum gauge size in Upper Cape Cod (OCC) state waters, finally closing a loophole which allowed oversized lobsters to be imported from Canada. In addition, the Board established a more conservative v-notch definition in OCC state waters of 1/8” (previously 1/4”), creating a consistent v-notch definition between LMA3 and OCC. LMA1 maintains a zero-tolerance v-notch definition.

Finally, I made a motion that the Board requests the ASMFC Interstate Fisheries Management Policy Board approve the creation of a subcommittee to engage Canada in issues related to importation of lobsters between the two countries. These conversations will be critically important to ensure equity for our harvesters and to support continued strong working relations between US lobster processors and Canada.

While I recognize that it’s an especially tough time to think about future changes in the fishery, this change to the Fishery Management Plan is necessary if we want to ensure the long-term resilience of this important fishery.

To summarize, every October the ASMFC Lobster Management Board (Board) will review trawl and ventless trap survey results to see if the 35% decline in the recruit abundance has occurred. We are currently at a 23% decline in abundance, and at this point we can’t predict when the 35% decline will be reached. If a 35% decline is not observed during the fall board meeting, no action will be considered until the next year’s fall meeting.

Addendum 27 continued from page 1
Notice of Intent to prepare an Environmental Assessment (EA) for Maine’s wind energy research array lease and is accepting public comments until June 5.

The first day of the Task Force meeting provided in-depth presentations on three emerging issues: floating offshore technology, offshore wind data collection activities including analyses for whales and other protected species, and transmission planning. In addition, BOEM staff provided a brief overview of the leasing process in the Gulf of Maine.

The second day dug deeper into BOEM’s leasing process in the Gulf of Maine to discuss opportunities, concerns and next steps. BOEM’s approach is to start with a very large area and remove areas that are unsuitable for offshore wind development based on feedback from developers or issues identified by other stakeholders due to environmental harm or significant conflict with existing uses. For the Gulf of Maine, the draft offshore wind planning area included almost the entire Gulf. Based on public comment, BOEM has removed from consideration all areas within 20 miles from shore and also other sensitive habitats.

The feedback BOEM receives through the Call for Information and Nominations in the Gulf will help the agency determine the level of interest from developers and better understand the conditions, which could further narrow down potential lease areas. BOEM will then publish “draft wind energy areas” for the public to comment on and conduct a NEPA (National Environmental Policy Act) analysis on the final “wind energy areas” to select a smaller area, which ultimately will be considered for offshore wind leasing.

According to BOEM the size and scope of offshore wind development in the Gulf of Maine will be determined by the states’ energy goals. During the meeting, Massachusetts revealed it plans to develop 23 gigawatts (GW) of offshore wind, Maine plans to develop 3 GW (a gigawatt equals 1000 megawatts (MW)). To achieve this energy output, 1,440 wind turbines (each producing 18 MW) would need to be constructed in the Gulf of Maine.

Transmission challenges were identified as one of the biggest hurdles to developing offshore wind. The region lacks high-capacity transmission infrastructure and faces significant challenges in developing solutions to move large volumes of wind energy through the few interconnection sites.

Additional information on the BOEM Gulf of Maine Task Force meeting and lease development process is available at https://www.boem.gov/renewable-energy/state-activities/maine/gulf-maine. BOEM is accepting public comment to gather information and assess interest in possible commercial wind energy development in the Gulf of Maine until June 12 (BOEM-2023-0025). BOEM is accepting public comments on its Notice of Intent to prepare an Environmental Assessment (EA) for Maine’s wind energy research array lease until June 5 (BOEM-2023-0031). Comments for both should be submitted through www.regulations.gov.

www.mainelobstermen.org

It’s been about a minute. That is how long I have been on the MLA team. In fact, I’ve been here three months but when you consider the seven-decade timeline of the Maine Lobstermen’s Association, I’ve been here just a minute. When I began to dive into my new position I often sat back and listened. I asked to be at any meeting and on every email and yes, any Zoom I could. I wanted to listen to anyone and everyone. I wanted to hear who took part in the conversations, who added their opinions after the subject changed and who were the people who waited until the end to speak.

I read a lot too. Thankfully Landings issues are online, archived, so that challenges of past years are available to study, issues filled with the storylines of how we got to where we are today.

In 2016, Patrice wrote in “Steaming Ahead,” “It’s a privilege to be a lobsterman during times of plenty, but nevertheless we will face some tough issues ahead. We’ve certainly done a lot right over the years and there is much about this industry that should not change. Still, there are some changes that perhaps each lobsterman should be thinking about and that our industry as a whole should be discussing, ‘Fish smarter, not harder!’ 2016 was a great year for many, but also a year that led to a season of challenge and change. Even some younger lobstermen must look back now with nostalgia at a time when lobstering was a whole lot simpler (and less expensive).

In my first week on the job I was handed a “Fish Smarter, Not Harder” T-shirt to wear at the Fishermen’s Forum. It’s a good example of how understanding the meaning behind the words changes your perspective. This slogan was not a good example of how understanding the meaning behind the interruption, smiles and welcoming gestures immediately unshered him in. He came straight from getting his bait so had a certain aroma. Everyone at the meeting was excited to sniff the scent of the starting season; some even noticed that he had gone back to herring, which had been so hard to come by. It was jubilant and supportive. It was personal. I haven’t experienced this type of industry before, where your work is understood so personally by other fishermen throughout the Maine coast and the struggles you and your family face are also shared. The Maine lobster industry is old school, and some might say stuck in its ways. But it’s those ways that have built a fishery to be proud of. It’s the grit that keeps our small coastal towns afloat through economic ups and downs.

There is another voice that I think is important, that the MLA makes heard: the lobstermen too busy to advocate for themselves. They are giving it all their and trying to find a balance between sanity and survival. They are on the water chasing the catch and then on land planning their next day out. They and their families may not be as vocal, but they have deep felt concerns like the rest of us.

The more I dig, the more I realize there will never be a day when I can say, “I am all caught up!” Still, what I have already grasped is that the MLA is the glue. The MLA was founded in 1954. We are the oldest and largest fishing industry association in the state, still working nearly 70 years later to sustain the industry and the lobster resource.

Because the MLA is a credible voice and highly regarded we must remain in the painful conversations taking place about our lobstering future. You fish; the MLA fights.

The MLA has been and will continue working diligently to uphold lobstermen, the sustainable wild-caught food they provide, and the economic stability they create for our coastal communities and for our children to live and work in Maine. Whether you are a lobsterman, a business, or just someone passionate about Maine and its iconic fishery, your support as a member matters.

I am so proud to be a part of the MLA team and its history. But if I am being honest, I am even more excited to see how our next chapter reads. There is a lot more that we will do minute by minute.

BY MLA COO AMBER-JEAN NICKEL

MAINE LOBSTERMEN'S ASSOCIATION UPDATE

The MLA Board of Directors met on May 3 at Darby’s in Belfast. The board discussed several staffing and administrative issues. COO Amber-Jean Nickel has been investigating all the MLA’s tools and is building standard operating procedures. The MLA is looking to improve members’ experience, such as improved accessibility through MemberClicks and increased membership value through add-on benefits (e.g., discounts, etc.). Board members were asked to continue to encourage lobstermen and businesses to become members.

The Maine Lobster Community Alliance (MLCA) continues to expand its work, particularly on the right whale issue. The MLA Board voted to give MLCA its red claw logo to brand fundraising. The MLA will use the other Save Maine Lobstermen logo used on the gray sweatshirts and hats for its fundraising work.

Dustin Delano announced that he accepted a position as Chief Operating Officer of the New England Fishermen Stewardship Association. He resigned his position as vice-president but will remain on the MLA Board. The board elected its officers for a one-year term: Kristan Porter, president; Craig Stewart, vice-president; Jarod Bray, vice-president; Jim Dow, treasurer; and Chris Welch, secretary.

Patrice McCarron updated the board on the status of bills before the Legislature. The EPA’s exemption of Tier 4 engines in lobster boats ends in 2024. In follow-up with the EPA, it was confirmed that there is already a process in place for boat builders to request an exemption if Tier 4 engines are not available after 2023.

BOEM will hold the Gulf of Maine Intergovernmental Renewable Energy Task Force in Bangor on May 10 and 11 to provide an update on BOEM’s commercial and research offshore wind energy planning activities and to discuss next steps for the Gulf of Maine.

BOEM is currently accepting public comment on conducting an environmental assessment for the Maine research area (due June 5) and on a Call for Information and Nominations to solicit public feedback and assess interest in possible commercial wind energy development in the Gulf of Maine area (due June 12).

On the right whale front, the MLA is waiting for the Appeals Court to issue its decision. Maine Department of Marine Resources (DMR) is preparing to ramp up its research on right whales using the $26 million in federal funds provided from the 2022 Omnibus bill to be disbursed by the Atlantic States Marine Fisheries Commission (ASMFC). DMR will be sending letters to lobstermen in June to encourage lobstermen and businesses to become members.

The MLA attended the Auburn Lobster Festival on May 16. The Festival included a lobster bake and buoy painting contest. The Festival raised money for the sustainability of Maine’s Lobstering Heritage” at the Elks Lodge in Portland. This event featured bands and comedians who came together to support the SML campaign.

The MLA also joined the Maine Tourism Association for its 101st Annual Meeting. Patrice McCarron joined Maine Lobster Marketing Collaborative director Marianne LaCroix and Curt Brown from Ready Seafood on a panel to discuss how the right whale regulations threaten the future of the lobster industry.

The MLA will be at the 10th annual Claw Down Lobster Bite Competition on June 15 in Boothbay, which will feature local chefs competing for the best lobster bite. The South Bristol Fisherman’s Co-op is holding a SML fundraiser on June 17, which will include a lobster bake, a raffle and silent auction featuring dozens of items donated by local businesses.

On August 27, the MLA will be at the “Music, Masts, and Lobster Traps” at Maine Maritime Museum for a daylong celebration of Maine’s lobstering heritage, including a concert by the Mallett Brothers Band.

DMR MEETINGS ON ELECTRONIC REPORTING

DMR will host a series of meetings on electronic reporting that will feature one-on-one training. Participants should bring their own laptop/smartphone/tablet as well as passwords needed to access emails, iCloud, or app downloads. Contact Marissa DeCosta at (207) 592-2746 with questions about the meetings.

Ellsworth, May 25, 12 to 5 pm
BE Moore Community Center - Conference Room

Rockland, June 1, 12 to 5 pm
Rockland Ferry Terminal - Conference Room

Brunswick, June 8, 12 to 5 pm
Curtis Memorial Library - Morrell Meeting Room

Stoneington, June 15, 12 to 5 pm
Maine Center for Coastal Fisheries - Conference Room

Kennebunk, June 22, 12 to 4:30 pm
Kennebunk Free Library - Hank’s Meeting Room

East Machias, June 29, 12 to 5 pm
Washington Academy

LEGAL UPDATE

The MLA is still active in three lawsuits. First, the MLA Appeal has been fully briefed and arguments have been made to the panel of judges in the D.C. Appeals Court. The decision is expected soon. NMFS is seeking to dismiss the environmental group’s case before Judge Boasberg but this may not be considered until after the ruling in the MLA case. Parties must file a joint status report to the court by July 10. Third, the Monterey Bay Aquarium’s motion in the MLA vs. Aquarium was due May 22, with the MLA’s response due July 24.

SAVE MAINELOBSTERMEN CAMPAIGN

The MLA attended the Audubon Lobster Festival on May 16. The Festival included a lobster bake and buoy painting contest. The Festival raised money for the SML campaign. On May 17, the MLA attended “Band Together: A Celebration of Maine’s Lobstering Heritage” at the Elks Lodge in Portland. This event featured bands and comedians who came together to support the SML campaign.

The MLA also joined the Maine Tourism Association for its 101st Annual Meeting. Patrice McCarron joined Maine Lobster Marketing Collaborative director Marianne LaCroix and Curt Brown from Ready Seafood on a panel to discuss how the right whale regulations threaten the future of the lobster industry.

The MLA will be at the 10th annual Claw Down Lobster Bite Competition on June 15 in Boothbay, which will feature local chefs competing for the best lobster bite. The South Bristol Fisherman’s Co-op is holding a SML fundraiser on June 17, which will include a lobster bake, a raffle and silent auction featuring dozens of items donated by local businesses.

On August 27, the MLA will be at the “Music, Masts, and Lobster Traps” at Maine Maritime Museum for a daylong celebration of Maine’s lobstering heritage, including a concert by the Mallett Brothers Band.

ATLANTIC STATES MARINE FISHERIES COMMISSION

American Lobster – The Lobster Board approved Addendum 27 to Lobster Management Plan on May 1. The Board initiated the Addendum as a proactive measure to improve the resiliency due to observed declines in lobster settlement surveys and recruitment indices throughout the Gulf of Maine (GOM) (see Landings article on page 1).

Atlantic Menhaden – The Menhaden Board met on May 1. The Board requested a report from Virginia on the proposed and enacted legislative and regulatory changes since 2019, as well as management responses to recent fish kill events. The Stock Assessment Subcommittee (SASS) and Assessment Science Committee recommended converting the single-species assessment from a benchmark to an update, since the model has been peer-reviewed several times and no new data sources were identified that would necessitate utilizing the benchmark process. The Board approved the Draft Terms of Reference for the Ecological Reference Points (ERP) Benchmark Stock Assessment. The Single-Species Assessment Update and ERP Benchmark Stock Assessment are scheduled to be presented to the Board at the Annual Meeting in 2025.

ASMFC Law Enforcement Committee – The Law Enforcement Committee met on May 2 and discussed the status of vessel monitoring system (VMS) implementation in the lobster fishery under Addendum 29. The software program and approved hardware vendors for VMS systems were reviewed. ASMFC staff will continue to work with the LEC input to working group discussions regarding further VMS development and use in the lobster fishery.

The committee also discussed the consistency of management measures across specific Lobster Conservation Management Areas under newly adopted changes in Addendum 27. The LEC recognizes the uniqueness of certain LCMAs but continues to support consistent management measures within each of the LCMAs.

Continued on page 8
The Maine 131st Legislature is considering legislation which would affect the Maine lobster fishery.

Passed
LD 574 An Act to Amend the Laws Governing Working Waterfront Covenants, sponsored by Rep. Rielly of Westbrook. This will allow certain nonprofit organizations whose purposes or powers include retaining or protecting coastal community values, culture or heritage, coastal habitat or real property that provides coastal water access to hold working waterfront covenants.

LD 144 An Act to Amend the Laws Governing Eligibility Restrictions for Commercial Menhaden Fishing Licenses, sponsored by Rep. Faulkingham of Winter Harbor. This amended language relaxes eligibility requirements for obtaining a commercial menhaden license by adding 2022 as a qualifying year. A license holder is now eligible if they held a commercial menhaden license in 2 of the following 4 years: 2019, 2020, 2021, 2022 but specifies that if a license holder already holds a commercial license, they cannot use 2022 to qualify for a second license. To be eligible, proof of landing 25,000 lbs in any year 2019-2022 must have been submitted to the DMR no later than January 1, 2023. DMR estimates that the amendment to the licensing criteria will add 28 new commercial licenses to the fishery.

LD 1552 An Act to Create the Lobster Innovation Fund, sponsored by Sen. Vitelli of Sagadahoc. Establishes the Lobster Innovation Fund to provide stipends to Maine commercial lobstermen who participate in the testing of new lobster fishing technologies through a one-time appropriation in each year of the bennium to the fund (2023/2024 and 2024/2025). The Fund may also accept donations. This is supported by the Marine Resources Committee but passage pending review of the Appropriations Committee.

Carried Over to Next Session

Tabled
LD 370 An Act to Protect Marine Resources in Maine, sponsored by Sen. Reny of Lincoln. This is a concept draft that proposes to protect marine resources in the State.

Not Voted
LD 1895 An Act Regarding the Procurement of Energy from Offshore Wind Resources, sponsored by Sen. Lawrence of York. Seeks to procure 1,000 MW by 2030 (55 turbines at 18 MW) and 2,800 MW by 2035 (155 turbines at 18 MW) of offshore wind. The amended bill includes language to incentivize siting any offshore wind outside LMA I by offering developers tax benefits.

LD 1884 An Act to Prohibit Offshore Wind Energy Development, sponsored by Rep. Strout of Harrington. Seeks to prohibit the licensing, or permitting the siting, construction or operation of, or issuing a lease or granting an easement for an offshore wind power project in state-owned submerged lands, territorial waters or federal waters. It also removes the exemption for the Monhegan project from the state waters exemption.

LD 258 Includes Department of Marine Resources Biennial Budget. Referred to Committee on Appropriations and Financial Affairs. Seeks a net increase of $5,170,676 in General Fund to DMR including $3.6 million to replace the agency’s 70 year old Cessna plane with a Kodiak 100; $200k for ongoing maintenance of the Boothbay lab; an increase of $100k to maintain DMR’s boat fleet; and $125k to cover increased Marine Patrol fuel costs.

LD 191 An Act to Amend the Laws Regarding Certain Business Equipment Tax Benefits, sponsored by Sen. Stewart of Aroostook. Proposes to exclude businesses that restrict or prevent the sale or distribution of any product that is legally produced, harvested or grown in the State based on 3rd-party certifications, bans, or boycotts from eligibility for the business equipment tax exemption and the business equipment tax reimbursement.

Not scheduled for Public Hearing
LD 1618 An Act to Create the Lobster Industry Working Group, sponsored by Rep. Golek of Harpswell. This bill proposes to require DMR to convene a working group to develop a longterm plan to support the lobster industry.

Dead
LD 841 An Act to Create a Restricted Senior Lobster and Crab Fishing License, sponsored by Rep. Perkins of Dover-Foxcroft. This bill proposed a restricted senior lobster and crab fishing license, limited to 100 lobster traps, to be exempt from current entry requirements.

LD 563 An Act to Assert State Sovereignty over Ocean Waters up to 12 Nautical Miles off the State’s Coast, sponsored by Sen. Brakedown of Androscoggin. This bill proposed the State of Maine claim jurisdiction and control all waters out to 12 nautical miles. It was determined that the state does not have this authority.

LD 742 An Act to Divest State Pensions from Companies Boycotting Maine Lobster, sponsored by Sen. Brakedown of Androscoggin. This bill proposed to require the Maine Public Employees Retirement System to divest portfolios of companies publicly refuses to purchase Maine lobster.

Nearly 3,000 people turned out on May 6 to enjoy the first Auburn Lobster Festival.

The City of Auburn, which invited the Maine Lobstermen’s Association (MLA) to participate, also organized a special buoy painting contest, which raised $1,600 to be split between the MLA and one lucky winner drawn randomly from all the buoy entrants. In addition, several other participants donated funds to the MLA’s Save Maine Lobstermen campaign, including Geary Brewing Co. whose servers donated all their tips — nearly $500! One employee, Cathy Proctor, went so far as to donate part of her own paycheck to the cause! These acts of kindness are incredible.

Next year’s event will be even bigger and better, according to organizers, and the MLA looks forward to watching it grow into an annual tradition.

On Sunday, May 7, the ballroom of the Elks Lodge in Portland was filled with music and laughter as the first “Band Together; A Celebration of Maine’s Lobstering Heritage” rocked the house to show support of SaveMaineLobstermen. Music was provided by Mike Maurice, John Hughes Radio, one hundred thorns, Paddy Mills, and Holy Smoke.

Comedians Connor McGrath and Adam Groppman kept the crowd laughing while Emily Dillon did a masterful job as master of ceremonies. Special appreciation to Cape Ann Lobstermen, a dealer in Gloucester, MA, who made a last-minute donation of lobster for the lobster roll! It’s inspiring to see support growing for our efforts. We were invited to set up a Save Maine Lobstermen information table at the 10th annual Claw Down Lobster Bite Competition on Thursday, June 15th. Claw Down, sponsored by the Boothbay Harbor Region Chamber of Commerce, will feature local chefs competing for the best lobster bite. Tickets are available through the Chamber’s website at www.boothbayharbor.com.

Tickets are also on sale (while supplies last!) for the Save Maine Lobstermen fundraiser at the South Bristol Fisherman’s Co-Op on Saturday, June 17th. Tickets are $50 each for the lobster bake, a raffle and silent auction, which will feature dozens of items donated by local businesses. The folks at the Co-op say tickets are going fast so call Laura at 650-0960 to reserve yours.

Finally, details are still coming together for what promises to be the event of the summer! “Music, Masts, and Lobster Traps” will be held on Sunday, August 27th at Maine Maritime Museum in Bath. We expect more than 1,000 people to turn out for a daylong celebration of Maine’s lobstering heritage. Demonstrations, displays, and of course lobster will be available during the day with paid admission to the Museum (MLA members with proof of membership get in free!). At 4 p.m., the Mallett Brothers Band will take the stage under a special tent to entertain the evening crowd. Tickets to the concert are being sold separately and are now available online at https://mlcalliance.org/events/music-masts-lobster-traps.

SaveMaineLobstermen Partner Profile: Moody’s Gifts

By MLA staff

At the corner of Route 1 and Main Street in Waldoboro, a little gift shop sits in the shadow of its much older and much more famous big sister, Moody’s Diner. Along with the Diner’s trademark gear and Maine-made handcrafts and treats, you can also find sweatshirts, T-shirts and hats that benefit the Maine lobster industry.

Mary Olson founded Moody’s Gifts in 1999. And though Mary and her family sold the business last year to another family member, the gift shop’s tradition of supporting Maine lobstermen lives on through a special logo design.

The Olson family is close to Friendship lobsterman and MLA Board member, Dustin Delano. Mary learned early in 2020 about the industry’s struggles in the face of stringent right whale protection measures. She was determined to help. It was Mary and her daughter Jasmine who first came up with the idea of the traditional Save Maine Lobstermen sweatshirt design which the Maine Lobstermen’s Association quickly adopted as its campaign logo.

Working with Monte Gross at A.M. Associates in Waltham, Massachusetts, Mary and Jasmine helped develop the logo and produced first T-shirts, sweatshirts, and later hats. Mary then found vendors who would agree to donate a portion of all sales to the MLA Save Maine Lobstermen legal defense fund.

Delano Seafood in Waldoboro was one of the first to carry the sweatshirts in its store; Hamilton Marine and Midcoast Marine Supply soon stepped up to carry Save Maine Lobstermen products in all their stores. Save Maine Lobstermen items can now be found from Kittery to Jonesport and A.M. Lobstermen, a dealer in Gloucester, MA, who made a last-minute donation of lobster for the lobster roll! It’s inspiring to see support growing for our efforts. We were invited to set up a Save Maine Lobstermen information table at the 10th annual Claw Down Lobster Bite Competition on Thursday, June 15th. MARKETING UPDATES

The MLMC is showcasing the people that make up the lobster industry with compelling images and stories that will be shared across social media platforms through a paid digital advertising campaign. These profiles will help put faces to the fishery while communicating key messages to our target audience. Many thanks to those who took time out of their schedules to help us with this promotion, including Stephen Brooks of Brooks Trap Mill, Denny Fiaalii of Luke’s Lobster, Katie Werner of Island Lobster Co., and lobstermen Sadie Samuels, Krista Tripp, Thom Werner, and their families.

## AQUAMESH®

**Still Making History**

Proudly Made in the USA Since 1980

Our History, Your Legacy

A tribute to the revered Riverdale Aquamesh®

Aquamesh® features high strength steel wire, the heaviest zinc coating, and Riverdale’s proprietary marine grade PVC coating. Aquamesh® is pure and simple. It is the best; built for you, built to fish.
Twin Disc’s MGX series marine transmissions and QuickShift® controls provide smooth, fast shifting along with amazing slow-speed control. And the QuickShift® control head isn’t just another pretty face; it’s designed to be workboat tough!

Lobster Advisory Council meeting

By Jeff Putnam, LAC chair

The Lobster Advisory Council (LAC) met on April 27. I assume that none of us reading this really thought that the 6-year pause on new restrictions pertaining to right whales meant that we could sit back and enjoy some quiet time.

DMR Commissioner Keliher explained in detail why he intended to make a motion at the upcoming ASMFC meeting for a gauge increase that would take effect once a trigger level was hit. The discussion was focused on the nuances of market impact, the difference in Canadian retention practices and how areas outside of LMA 1 would be affected.

The conversation is an example of the importance of the LAC. The broad spectrum of lobstermen at the table, some of whom fish next to Canadians and some of whom fish next to the Massachusetts fleet, is beneficial to the policy makers. We each brought a unique perspective and were able to look at the gauge increase impacts and explain how these proposals affect different areas.

We are in a time when a new term or phrase is presented at almost every meeting. The latest is “passive acoustic monitoring (PAM).” Did you know that DMR and the University of Maine have around 20 acoustic sensors in LMAs 1 and 3 to record the sounds whales make in the water? The term “passive” means that the monitor detects and records noise and the time and makes the data available when it is retrieved.

These PAMs will be used, along with harvester reporting, federally permitted vessel tracking devices, and DMR’s new analysis to build the case that we all know is true: Maine lobstermen do not present real risk to North Atlantic right whales. Federal funding that our Congressional delegation and DMR secured will be put to use immediately to counter the false assertions that have been presented in previous right whale risk models created by the National Marine Fisheries Service.

The DMR relies on LAC members to provide input, but we also have to go back to our zones and harbors and relay the reasons why new regulations (such as 100% reporting) are important in the long run. Believe it or not, the DMR is not just compiling boatloads of information for the fun of it!

The LAC also received an update on offshore wind. We all have followed the process that the Governor’s Energy Office has taken on the proposed offshore wind research array. The Bureau of Ocean Energy Management (BOEM) held a two-day task force meeting in Bangor on May 10 and 11 to update the public on their research and also to lay the groundwork for coring and offshore wind leasing in the Gulf of Maine. The LAC has voiced its opposition to offshore wind in the past. No changes to that sentiment were presented at this meeting.

The LAC appreciates that Marine Patrol always attends the meeting to learn how any new regulations will affect lobstermen. They also update us on staffing changes, plans for patrol boat upgrades, and enforcement compliance rates.

We also understand that DMR spends considerable time in the Legislature’s Marine Resources Committee. While we are fishing or doing onshore gear work, DMR staff are attending hearings and work sessions on bills that affect our fisheries. The LAC was updated on a broad range of proposed bills, from state territorial waters changes to menhaden license qualification changes.

Since the LAC and lobster zone councils all met this spring, we’ll probably take a break for the summer. Please be thinking about what the industry can do proactively to prepare for the inevitable changes that we will face in the years to come. What can we do now to leave our younger fishermen an industry that they are willing to devote their heart and soul to in the way that we have? Those are the topics that I want to have on the agenda for the next round of meetings.

Lobster Zone Council meetings

By DMR staff

The Department of Marine Resources (DMR) held seven Lobster Zone Council meetings in the month of April, during which DMR staff covered a lot of ground, but the primary focus of conversation was Addendum XXVII to the Atlantic States Marine Fisheries Commission’s (ASMFC) Interstate Management Plan for American Lobster.

Some of you have seen Commissioner Keliher’s notices explaining the addendum, both of which are available on the DMR website. Because of the impact on industry, this information bears repeating, so here is a summary of information for LMA 1 harvesters.

The Addendum is intended to protect the Gulf of Maine/Georges Bank (GOM/GBK) spawning stock biomass. It establishes a trigger that implements management measures if the abundance of sub-legal (71-80mm) lobsters declines by a specific percentage.

The data on sub-legal lobster abundance, known as the recruit abundance, comes from the ventless trap survey and the trawl survey. The management measures include gauge and escape vent size changes. ASMFC’s Lobster Management Board was considering a range of triggers from a 32% decline in the recruit abundance to a 45% decline.

At each zone council meeting Commissioner Keliher discussed the draft addendum and sought feedback from industry before participating as a member of the Lobster Management Board during its meeting in May. Harvesters shared strong concerns about the change, but also acknowledged the need to take action that prevents a collapse of the stock.

Many industry members at the meetings pushed for the management changes to only be triggered when the decline reached 45%. But when it was explained that that approach would result in a 60-million-pound fishery before a trigger was pulled, industry advice to the Commissioner focused on a trigger in the mid-thirties. Commissioner Keliher proposed a 38% trigger during Board deliberations, however, the Board voted for a 35% trigger.

The ASMFC Lobster Management Board will review the data each October, and if a 35% decline is observed, the change would not take place until June of the following year. We are currently at a 23% decline in the recruit abundance, and at this point we can’t predict when the 35% decline will be reached. Also, if the trigger is tripped, the changes won’t happen all at once, but will be implemented over several years.

### Changes to LMA 1

1. **1st Gauge Increase**
   - The first 1/16th of an inch gauge increase will take effect June 1 of the year after a determination by the Board that a 35% decline in recruit abundance has occurred.

2. **2nd Gauge Increase**
   - On June 1, three years after the Board’s determination, the second 1/16th of an inch gauge increase for LMA 1 harvesters will take effect.

3. **Escape Vent Increase**
   - On June 1, four years after the Board’s determination, lobster trap escape vent size increases will take effect.
I got older, I got a bigger skiff with a hauler and fished with my cousins and my dad,” he said. The lure of lobstering for Doughty was two-fold. “My dad got me going. I wanted to make him proud. And the money is definitely good,” he said with a laugh.

Over the years he found a way to balance school and lobstering. Doughty would haul in the summer months and then on weekends.

Once he entered high school he hauled on weekends and occasionally during the school week. “I skip some days,” he said. He typically sets 150 traps but this year will have 300 ready by June 6, his birthday.

Doughty is aware of the issues facing the fishery, from right whale regulations to offshore wind developments, plus the environmental changes in the Gulf of Maine due to warmer water. They are clouds building on his future horizon.

“I hope it will all hold off until I really get going. I want to be able to save money and buy my own house when I’m 21,” he said. He has a back-up plan in case the fishery changes dramatically in the next five years. “It’s always good to plan ahead. I’m interested in joining the Marines or training to be a plumber,” Doughty said. “But I really want to fish until I can’t because of regulations. My great-grandfather was a lobsterman, my father is and now me.”

His cousin Noah Ross, 19, is a lobster-man through and through. His thoughts are on the upcoming season, what the price is now, what the price might be in July. He remembers when he started fishing back when he was 13, sterning for his uncle Travis.

“I was baiting irons, all that. The biggest thing, even then, was being my own boss,” he recalled. After graduating from Oceanside East High School, Ross set his mind to lobstering. “I never really thought about doing anything else, to be honest. But I don’t know where it’s going. If lobstering goes bad, I’d be kind of stuck,” he said. “Maybe scalloping or working at my grandparents’ fencing business.”

He and Jace have fished together for years, currently from their shared boat. But that will change this year. “He is going to go alone. We’ll get a schedule to make it work. I haul through twice a week so it might be two days at the beginning and end of the week for me, the rest for him,” Ross said. He lobsters inside; his cousin is thinking about someday getting a federal license to fish outside state waters.

Looming right whale protection regulations, now delayed until 2029, concern Ross but he realizes that he is in a better position than many other lobstermen. “I don’t have a lot of debt. A lot of the highliners, they have a lot to worry about — big boats, houses, nice trucks. If we lost the lobster fishery, they would be in trouble real quick,” Ross said. “My worry is that we will end up with a quota for lobster, like so many other fisheries.”
Falling prey to painful illness with long-lasting effects. In 2022, Maine Center

Guess what? Maine is brimming with deer ticks and thus many Mainers are species planning to attack Earth. In fact, each is a horrible illness that attacks Powassan. Babesiosis. Anaplasmosis.

Symptoms may be from one week to one month. Those symptoms may include fever, receive support for breathing or reducing swelling in the brain. Currently there

be seizures. People with severe cases of Powassan often need to be hospitalized to

headache, vomiting, weakness, confusion, loss of coordination, slurred speech,

been found in deer ticks. The period between the tick bite and onset of symp-

a virus. Typically carried by the woodchuck and squirrel ticks, it has recently

both indications of anemia. The number of cases in Maine is low, relative to

s. The common treatment for Lyme disease is oral antibiotics.

The illness is also treated with doxycycline or other oral antibiotics.

Dress appropriately

• Wear light-colored clothing to make ticks easier to detect.

• Wear long pants tucked into socks or boots and tuck your shirt into your

• Do not wear open-toed shoes or sandals when in potential tick habitat.

• Use tick repellents

• Use products that contain permethrin to treat clothing and gear. Do not

• The use of repellents that contain 20-30% DEET on exposed skin and cloth-

• Other tick repellents recommended by the Centers for Disease Control and

How to remove a tick

• Use tweezers or a tick removal spoon.

• Do not use petroleum jelly, a hot match, nail polish, or other folk remedies

• Do not use tick repellents

• Although the deer tick may feed on a wide variety of hosts, two of its fa-

• Take note that if these two animals are prevalent on your property, ticks

• Although the deer tick may feed on a wide variety of hosts, two of its fa-

• Don’t consider permanent.

Deer ticks carry Lyme dis-

ease. Lyme disease is cur-

rently the most reported vector-borne (transmitted by an anthropod) illness in

the United States. Infected people suffer headaches, fever, chills, joint and mus-

cle pain, fatigue. Less than

50% of those infected de-

velop a characteristic rash which looks like a bullseye.

The common treatment for Lyme disease is oral antibiotics such as doxycy-

cline: if left untreated, Lyme disease may lead to severe arthritis, facial palsy,

meningitis, and carditis.

Anaplasmosis is another nasty sickness caused by bacteria carried by the deer

tick. The number of reported cases in the country has been increasing over the

past twenty years particularly in Maine, where cases nearly doubled each year

from 2012 through 2017. Symptoms of anaplasmosis may include fever and

chills, severe headache, body aches, fatigue, nausea, vomiting, and diarrhea.

The illness is also treated with doxycycline or other oral antibiotics.

Babesiosis also comes from deer ticks but is caused by a parasite, not bacteria,

that infects red blood cells, potentially causing anemia. Symptoms of babesio-
sis are similar to anaplasmosis but may also include dark urine or jaundice,

both indications of anemia. The number of cases in Maine is low, relative to

Lyme disease, but has increased slowly, reaching a high of 192 reported cases

last year.

Powassan encephalitis is a potentially fatal neuroinvasive disease caused by a

virus. Typically carried by the woodchuck and squirred ticks, it has recently

been found in deer ticks. The period between the tick bite and onset of symp-
toms may be from one week to one month. Those symptoms may include fever,

headache, vomiting, weakness, confusion, loss of coordination, slurred speech,

seizures. People with severe cases of Powassan often need to be hospitalized to

receive support for breathing or reducing swelling in the brain. Currently there

are no treatments for the illness. While rare in Maine, it does occur. A person in

Sagadahoc County died of Powassan in late May; a Waldo county resident died

in 2022 as did a Cumberland county resident in 2019.

No one in their right mind wants to get any of these diseases. Yet many of us

want to go hiking, hunting or just hang out in the backyard with the dog. To

do so safely during tick season, which now occurs from May until November

in Maine, you must take preventive steps. Remember, deer ticks like cool, high

humidity habitat so they will be found in shaded, moist places covered with

leaf litter and debris. They also require animal hosts (such as white-tailed deer

or white-footed mice) on which to feed. Ticks tend to be most abundant in the

Check for tick hosts

• Although the deer tick may feed on a wide variety of hosts, two of its fa-

• Take note that if these two animals are prevalent on your property, ticks

• Use tick repellents

• Use products that contain permethrin to treat clothing and gear. Do not

• The use of repellents that contain 20-30% DEET on exposed skin and cloth-

• Other tick repellents recommended by the Centers for Disease Control and

Prevention (CDC) include picaridin, oil of lemon eucalyptus, and IR3535.

TO YOUR HEALTH:  Tick bites pack a powerful punch

By Melissa Waterman

Powassan, Babesiosis, Anaplasmosis. The names sound like some horrible alien

species planning to attack Earth. In fact, each is a horrible illness that attacks human beings through the bite of the deer tick.

Guess what? Maine is brimming with deer ticks and thus many Mainers are falling prey to painful illness with long-lasting effects. In 2022, Maine Center for Disease Control reported 2,636 Lyme disease cases — a new annual record — 824 anaplasmosis cases, 192 babesiosis cases, plus 26 additional tick-based illnesses.

There are three tick species that are permanent inhabitants in the state: Blacklegged tick or Deer tick, American Dog tick, and the Woodchuck tick, according to the Cooperative Extension Tick Lab at the University of Maine. Twelve other species of ticks can be found in the state but are not considered permanent.

Deer ticks carry Lyme dis-

ease. Lyme disease is cur-

rently the most reported vector-borne (transmitted by an anthropod) illness in

the United States. Infected people suffer headaches, fever, chills, joint and mus-

P.E.I. NORTH SHORE LOBSTER FISHERY CLOSED FOR RIGHT WHALES

Lobstermen along Prince Edward Island’s northern shore had to remove gear from the water just three weeks into a two-month season due to a right whale sighting. The dynamic closure is limited to waters deeper than 10 fathoms and must remain free of lobster gear for 15 days. Government officials will conduct aerial surveys of the area between days nine and 15 of the closure. If a right whale is sighted during that time, the area will remain closed until November 15. The area will reopen if there are no right whales are sighted.

NEW FISHERMEN ADVOCACY GROUP FORMED

A new advocacy group for New England fishermen seeks to "fight against needless regulation and offshore wind development threatening the viability of the American fishing fleet," organizers say. The New England Fisherman Stewardship Association (NEFSA) was founded by Jerry Leeman, a longtime New Bedford trawler captain and a resident of Orr’s Island, Maine. Leeman, now the group’s first executive director, introduced the enterprise on May 2 with an op-ed column in the Portland Press Herald. Dustin Delano, former vice president of the Maine Lobstermen’s Association, serves as the chief operations officer.

ENERGY DEVELOPERS EYE GULF OF MAINE FOR FUTURE INTERNATIONAL GRID

A coalition of seven developers of offshore wind, green hydrogen, and transmission solutions has formed to explore the benefits of a US-Canadian transmission corridor. To this end, the New England – Maritimes Offshore Energy Corridor (NEMOEC) coalition, in partnership with Power Advisory LLC and DNY, has released a white paper titled A New England – Maritimes Offshore Energy Corridor Builds Regional Resilience for a Clean Energy Future. The paper discusses the potential benefits of a 2,000 MW shared transmission link between Nova Scotia and New England, connecting offshore wind in the Gulf of Maine and in Nova Scotia with load centers in the two regions via a new HVDC transmission intertie.

MONKFISH STEW WINS NATIONAL AWARD

The Maine Coast Fishermen’s Association’s (MCFA) Monkfish Stew was recognized with a 2023 Good Food Award in April. The national award comes from the Good Food Foundation, which aims to celebrate, connect and empower makers of authentic food. The products also meet environmental and social responsibility standards. MCFA worked with Hurricane’s Premium Soups and Chowders of Greene to create Maine Coast Monkfish Stew as a way to introduce consumers to monkfish and to create revenue for its Fishermen Feeding Mainers (FFM) fish donation program.

MASSACHUSETTS PURSUES MORE OFFSHORE WIND ENERGY

In early May, Massachusetts Governor Maura Healey’s administration and the state Department of Energy Resources released a draft proposal asking offshore wind developers for their plans to produce another 3,600 megawatts of offshore wind power. If approved, it would be the biggest-ever solicitation of wind energy in New England history. The wind power would supply 25% of the state’s electricity demand. If approved by the Department of Public Utilities, the project would be the largest in New England. Healey’s administration hopes to open bidding on the new procurement by this June, with a January 31, 2024 due date for submissions. “This draft RFP is a signal to the rest of the world that Massachusetts is all-in on offshore wind and ready to be the industry’s hub,” Governor Healey said in a statement.

MASSACHUSETTS TESTING ON-DEMAND LOBSTER GEAR

By Craig Idlebrook

This spring, researchers were given an expanded opportunity to test lobster trap gear that eliminates the need for vertical buoy lines in waters traversed by critically endangered North Atlantic right whales.

Under the direction of NOAA, and with permission from the Massachusetts Department of Marine Fisheries, a fleet of ten vessels has been allowed since February 1 to use special on-demand lobster traps in either state or federal waters along the eastern coast of Massachusetts and south of Martha’s Vineyard. The fleet has until the end of April to test the traps in areas that are otherwise closed to traditional lobstering to protect the endangered whales from entanglement.

As of late March, lobstermen have retrieved the traps from the ocean floor 186 times, according to NOAA data. The lobstermen and the researchers are continuing to test the effectiveness of both the on-demand gear and the mapping technology used to find the traps.

In this round of permitted fishing, one focus is ensuring the tracking technology is accurate even when traps are in proximity to one another. Semi-retired lobsterman Marc Palombo said this tracking technology recently passed a critical test in federal waters: “We got another vessel with a satellite with internet on its boat and had it go right next to my boat, and I could see his gear and he could see my gear,” he said.

This effort represents the largest chance yet to experiment with the on-demand traps in real world conditions in New England. For years, researchers have been working to design traps that could eliminate the need for standing vertical lines. Those efforts have met with some resistance, however.

For example, the Massachusetts Department of Marine Fisheries (DMF) denied an application by a group of lobstermen to test experimental gear in 2022. DMF agreed, and both efforts are being directly supervised by NOAA.

In his letter allowing NOAA to set the experimental traps, DMF Director Daniel McKiernan did express some skepticism about the practicality of the on-demand traps for coastal lobstering. “DMF’s view is that on-demand technology works best for those that fish long trawls on the larger vessels in the fleet,” he wrote. “Its applicability and affordability is far less for smaller vessels that fish single traps or short strings of gear in dense gear fields.”

Erica Fuller, a senior attorney for the Conservation Law Foundation, said that even with those doubts, it still made sense for state regulators to greenlight testing near shore, where lobstering activities are at their densest.

“There were some questions about how close can you actually fish this gear to another guy, and those questions weren’t so much being answered in the far offshore,” Fuller said. “While they were trying to get close, those [offshore] trawls are so much longer they’re generally not right on top of one another.”

DMF Director McKiernan is not alone in his skepticism. When asked about the latest round of testing of on demand gear, Beth Casoni, executive director of the Massachusetts Lobstermen’s Association sent the following statement: “The Massachusetts Lobstermen’s Association does not support the use of on-demand gear as the economics are not feasible and it will destroy the American lobster fishery.”

For now, Palombo is one of a minority of lobstermen who doesn’t share his colleagues’ pessimism on the evolving technology, and he has been recruiting other Massachusetts fishermen to the effort to test the new traps out. He knows the technology may still be unaffordable at this point for most fishermen, but he says the funding is there to help develop the trap gear, and he’s seen the improvements each year in the experimental gear. People need to remember that it’s a long process to create a new technology, he said.

“I like to use the analogy that we’re the Wright brothers right now,” Palombo said. “They didn’t start out with the F-15 fighter. They were at Kittyhawk, and that’s where we’re at right now. We’re at Kittyhawk.”
WE HELP CREATE A BRIGHTER FUTURE FOR LOBSTERMEN

We’ve served Maine lobstermen for over 10 years, and you’ve become central to the DuraBrite Lights story.

We’re reinvesting in the community with our #SaveMaineLobstermen product line. 20% of proceeds—not just profits—go directly to the Maine Lobstermen’s Association.
